

SmartLink™ Cellular Connectivity Kit Install Instructions

The Smartlink Cellular device enables you to add funds to your meter, perform automatic updates and receive alerts by using the cellular network.

What's in the Box

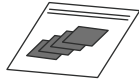

SmartLink cellular device

Power adapter

USB cable

Fastener strips

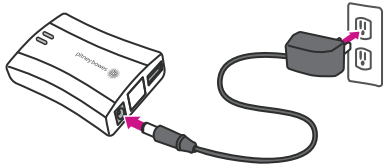

Setup instructions

The SmartLink Cellular device works with the following meters: DM50-DM60, DM100i-DM200i, DM220i, DM300 - DM400 series and DM475

1. Power up the SmartLink Cellular device and check the LED colour.

Plug the power adapter into the device and into a power outlet.

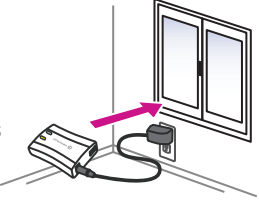

The  LED should start to flash blue. This indicates that the device is searching for a signal. Wait for two minutes, then move to step 2.

If the LED is not blinking at this stage, then that means the device is not functioning properly. **Note-** Allow a few minutes for the lights to settle. If the solid Blue light does not appear please go to the Pitney Bowes Support URL at the end of instructions.

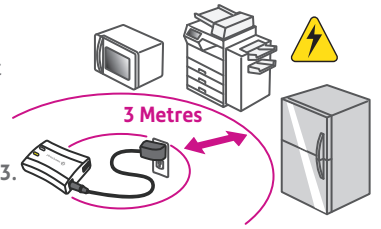

2. Check the LED colour, and follow the associated actions below.

LED color	LED Status	Actions
	Solid blue	 The device is connected. Move to step 3.
	Solid yellow	 The device cannot detect any signal at your location. Go to Pitney Bowes Support URL at the end of instructions.
	Flashing yellow	Move the device (and power adapter) closer to a window or outside wall. Plug in the power adapter and check the LED colour. When it changes to solid blue , move to step 3. 

Flashing blue and yellow

Move the device (and power adapter) at least 3 metres away from any electric appliances that could be causing interference. Plug in the power adapter then check the LED colour. If it turns to only **solid blue**, move to step 3.

If the LED does not turn to solid blue, try these steps:

- There is no need to connect the SmartLink Cellular device to your postage meter for this part.
- Move the device (and power adapter) closer to a window or outside wall.
- Plug in the power adapter as shown in step 1 and wait for two minutes. Then check the LED again.

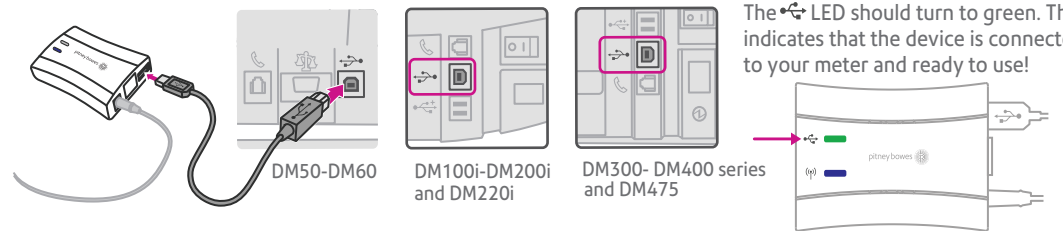

If you need further assistance, Go to Pitney Bowes Support URL at the end of instructions.

3. Disconnect your meter from the Phone or Network connection.

Make sure that the analogue phone line or any existing connections are disconnected from the meter.

4. Connect the SmartLink Cellular device to the back of your meter using the USB cable.

The  LED should turn to green. This indicates that the device is connected to your meter and ready to use!

Attach the device to your meter with the included Adhesive Fastener Strips.
